

FACUNDO MYCHALICZKA

Full-Stack web developer

I currently do not have professional experience in the field of web programming, but I continue doing personal projects that allow me to perfect my skills.

I focus more on the Front-End, although in Back-End development I can create databases and communicate with the Front-End taking into account the security and confidentiality of the data in circulation. These projects are captured in my personal portfolio, in which I give a brief description of it along with its documentation and/or code.

With my skills and experience in web development, I feel fully prepared to face new challenges and continue learning in this field. I am constantly looking for new projects and challenges to expand my knowledge and improve my skills.

EDUCATION

OnDemand Full-Stack Web Programming

NUCBA, 2023-2024

Certificates
